Profile

Web developer with a background in Computer Systems and Network Engineering, specialized in front-end and manual testing.

I have experience in web development technologies, which allows me to create functional web applications. In addition, I have experience in manual testing, ensuring software quality through detection, documentation of errors and validation of functionalities.

I am motivated by the creation of technological solutions and the continuous improvement of user experience. I stand out for my ability to work in a team, contributing ideas and ensuring software quality.

Academic projects

• RefugioSOS

March 2024 - december 2024

Role: Front-end developer

Web application designed to provide support to refugees, facilitating their access to shelters, resources and essential services.

• Hotel Buena Vista

September 2023 - december 2023

Role: Front-end developer

Informative website that presents the hotel's services, facilities and promotions, allowing users to learn about its offers and make reservations.

• Lectores Sin Rumbo

September 2022 - december 2022

Role: Front-end developer

Bibliographic management system that allows to register, organize and control book loans, optimizing the administration of libraries.
